Manual

Minor updates to manual for V6.2B. To include minor updates procedures, also listed below.

CMS (V6.01)

Created May 2013 see manual (section 1.2 & 1.3) for installation instructions. After installing the programs add the files from Minor updates for the latest version

Minor Updates

To V6.02B, created June 2013

Use for updates from V6.01 only. For earlier version update to V6.01 first and then do this one.

Minor updates require some file replacement, but do not effect the data (Stock, customer etc.).

1. Using the old version 'back-up' your data files to folder 'Bak'.

2. Rename the folder with the old version on your hard disk. After installing and using the new version, and all is working OK, the old folder can be deleted. (keep as a fall-back)

3. Down load the file(s), extract if necessary.

4. Now copy the file(s) into the folder replacing the existing files.

5. The upgrade should now work OK with no further operations.

Changes: minor changes to CMS_Sales.exe and missing file Stk_Adj.dbf
